Kenzie Academy - Software Development Project Based Training

Indianapolis, IN (remote)

01/2020 - 01/2021

January of 2021 I worked with other developers on an IMDB Clone. I was granted the title of being a software Developer given charge of setting up the error handling, authentication of the project, and making sure there were class based views inside the project. Finally I helped the team out with setting up the styling and then presenting the whole project in front of the school.

June of the training I created a Twitter Clone react app with a team of three other developers. My main role in this project is I implemented the icons, the API component, and finally the messaging component where you can post to the message feed that other developers have posted too. During July of the training I worked with a team of three of developers on a therapy app project, where I was given charge of creating the posting component where you type in a message and then hit submit
